

AKASH GOPALAN

Flutter Developer | Full-Stack Developer | Software Engineer

+91 9567885698 | akashprym@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Kasaragod, Kerala, India

PROFESSIONAL SUMMARY

MCA graduate and Mobile Application Developer with hands-on industry internship experience engineering cross-platform applications using Flutter and Dart. Proficient in Riverpod state management, asynchronous RESTful API consumption, and JSON parsing to build robust mobile client solutions. Adept at managing full-stack architectures by pairing mobile frontends with secure Django backends and cloud storage solutions. Proven record of delivering AI-powered software, deep learning tools, and computer vision utilities within collaborative, Agile Scrum sprint environments.

TECHNICAL SKILLS

Flutter & Mobile Dev: Flutter SDK, Dart, Riverpod, Provider, Clean Architecture, Dependency Injection, RESTful API Consumption, JSON Parsing, Responsive Layouts, Material Design, Android SDK, Custom Widgets, Reusable Modules

Testing & Tooling: Unit Testing, Widget Testing, Git, GitHub, Postman, Biometric SDK, Code Review, Pull Requests

Languages & Frontend: Dart, Python, JavaScript, React, Context API, HTML5, CSS3

Backend Frameworks: Django, Django REST Framework, REST APIs, Laravel, Secure Authentication, Real-Time Data Sync

Databases: PostgreSQL, MySQL, SQLite, Firebase, Firebase Storage

AI / Machine Learning: Computer Vision, OpenCV, CNN, Deep Learning, Image Processing, Predictive Modeling, Machine Learning, Random Forest, OCR, Feature Extraction, Data Preprocessing

Core Computer Science: OOP, DSA, DBMS, Operating Systems, SDLC, Agile Scrum

PROFESSIONAL EXPERIENCE

Full-Stack Developer

Ai2Gi Pvt. Ltd.

Jun 2026 – Present

Kerala, India

- Transitioned into a full-time Full-Stack Developer role, primarily driving Flutter development on a new product initiative while continuing to support Django-based backend integrations.
- Designed and built reusable Flutter modules and custom widgets to accelerate feature development and maintain UI consistency across the new application.
- Applied Clean Architecture and Riverpod-based state management patterns to keep the new codebase scalable and testable from the ground up.

Flutter Developer Intern

Ai2Gi Pvt. Ltd.

Dec 2025 – Jun 2026

Kerala, India

- Engineered responsive cross-platform mobile applications utilizing the Flutter SDK and Dart, ensuring pixel-perfect asset translation and fluid UI components across multiple screens and modules.
- Integrated Flutter application architectures with server-side Django RESTful APIs to enable secure user authentication, real-time data sync, and background network operations.
- Contributed to core cross-platform engineering workflows for ExamAIR, deploying modular code expansions, structural feature enhancements, and unit/widget test coverage for new components.
- Collaborated effectively within a fast-paced Agile Scrum team, actively participating in regular standups, task estimating, and feature sprints managed via version control.
- Utilized Git and GitHub for branch management, pull request reviews, and collaborative code peer review across the team.

PROJECTS

ExamAIR – AI-Powered OMR Evaluation System

Flutter • Riverpod • Django REST API • Python • OpenCV • CNN • MySQL

- Architected an AI-powered cross-platform mobile evaluation system using Flutter and Dart for automated, secure answer sheet assessment.

- Implemented Riverpod state management and dependency injection while following Clean Architecture principles to build a scalable, testable Flutter application.
- Integrated secure authentication with Django REST APIs and asynchronous JSON-based communication for user login and data processing.
- Built custom camera scanning overlays using OpenCV for image preprocessing alongside a CNN-based OCR pipeline for automated answer recognition.
- Automated real-time grading calculations to streamline exam verification and eliminate manual evaluation bottlenecks.

Fingerprint-Based Exam Hall Entry System

React • Django • PostgreSQL • C# • Biometric SDK

- Designed and developed a secure biometric verification architecture linking a React frontend and Django backend with a custom C# background service to capture and process hardware fingerprint scanner inputs in real time.
- Programmed robust biometric authentication functionalities including secure fingerprint enrollment, live identity verification, and entry log tracking to prevent exam impersonation.
- Integrated a transactional PostgreSQL database schema to securely cache, index, and manage encrypted student biometric hashes and operational log records.

NASA Space Apps Challenge – Exoplanet Hunter AI

Python • Machine Learning • Random Forest • Flask • React

- Built an end-to-end machine learning system for the NASA International Space Apps Challenge to classify celestial objects into confirmed planets, candidates, or false positives.
- Conducted comprehensive feature extraction, anomaly filtering, and data preprocessing on raw NASA Kepler astronomical datasets to make space research faster and more accessible.
- Trained and validated predictive models using Random Forest algorithms, exposing classification outputs via a Flask web service integrated with an interactive React frontend data dashboard.

Fake And Real Image Detection

Python • Deep Learning • CNN • OpenCV • Flask • Firebase Storage

- Engineered a deep learning platform utilizing a combination of Deep Convolutional Neural Networks (CNNs) to classify genuine versus manipulated imagery for automated social media content moderation.
- Extracted advanced structural features including pixel-level texture information and color distributions via OpenCV, bypassing the accuracy limitations of traditional metadata analysis.
- Trained and evaluated classification models on a large-scale image dataset, achieving high-performance optimization across core evaluation metrics including accuracy, precision, and recall.

ResFeast – Restaurant Service System

React • Django REST Framework • PostgreSQL • Context API

- Created a full-stack, web-based restaurant management platform engineered to automate online food ordering workflows, menu modifications, and real-time customer operations.
- Constructed isolated RESTful backend API functionalities in Django to reliably support secure customer authentication, menu item displays, and order status placement.
- Configured a relational database layer using PostgreSQL to achieve efficient data storage, transactional data integrity, and low-latency tracking of order histories.

EDUCATION

Master of Computer Applications (MCA)

Kannur University Campus Mangattuparamba

2024 – 2026

82.5% | Distinction

Bachelor of Science in Computer Science

Government College Kasaragod

2021 – 2024

73.39% | First Class

CERTIFICATIONS & ACHIEVEMENTS

- Award: NASA International Space Apps Challenge – Galactic Problem Solver Award
- Certification: Applied Machine Learning & Deep Learning Workshop – Kannur University (PM-USHA MERU)
- Certification: National Workshop & Add-on Course on Deep Learning Platforms
- Certification: NPTEL Soft Skills Development Professional Certification
